torrentQ: How to work with
"node_modules" folder? I
created a new project and added
a folder named node_modules.
How to start using this folder?
What should I do? I am using
Windows, I installed node.js
using: `npm install -g nodejs` A:
You have to install dependencies
in this folder to be able to use
these in your project. Add
node_modules to your .gitignore
file. You will not be able to

commit this to your code repository. Put dependencies on a folder like "node_modules/angular/angular.js" Include this file by adding `require('angular')` to your javascript Use `npm install` to install dependencies in the `node_modules` folder Now when you start developing your angular app, all you need to do is: `npm start` to run the server. At the end of the day, you have to be careful that you don't commit these changes to your git repository. If you do, you

won't be able to run your app. Q:

Vapor: Property 'file' not

initialized at superclass time My

Vapor code : class

PostCreateView: Node { var

posts: [Post] init() { posts =

[Post]() } func body(in database:

Database) throws -> Future { let

(insert, isInserted) = try

database.db.execute("INSERT

INTO posts (user, created_at,

title) VALUES (?, ?, ?)", user,

created_at, title) let savedPosts

= try

database.db.fetch("SELECT *

FROM posts ORDER BY id ASC")

```
if let savedPosts = savedPosts {  
posts.append(Post(id:  
Int(savedPosts.count), user:  
user, title f988f36e3a
```
